IT202-008-S2024 - [IT202] M2 PHP Problems

Submissions:

Submission Selection

1 Submission [active] 2/2/2024 6:14:51 PM

Instructions

^ COLLAPSE ^

Guide:

- 1 .Make sure you're in the main branch locally and ``git pull origin main`` any pending changes
- 2 .Make a new branch per the recommended branch name below (`git checkout -b ...`)
- 3 .Grab the template code from <https://gist.github.com/MattToegel/48b48377eaa1937c886b7840c449750a>
- 4 .Create individual PHP files for each problem and save the files inside your `public_html` folder in a subfolder of your choice
 - 1 .If you don't have this folder yet, refer to the setup lessons (you'll need a few files for the deployment to work)
- 5 .Move the unedited template files to github
 - 1 ``git add .``
 - 2 ``git commit -m "adding template files"``
 - 3 ``git push origin <homework branch>`` (see below and don't include the `< >`)
 - 4 .Create and open a pull request from the homework branch to main (leave it open until later steps)
- 6 .Note: As you work, it's recommended to add/commit at least after each solution is done (i.e., 3+ times in this case)
 - 1 .Make sure the files are saved before doing this
- 7 .Fill in the items in the worksheet below (save as often as necessary)
- 8 .Once finished, export the worksheet
- 9 .Add the output file to any location of your choice in your repository folder (i.e., a `Module2` folder)
- 10 Check that git sees it via ``git status``
- 11 If everything is good, continue to submit
 - 1 .Track the file(s) via ``git add``
 - 2 .Commit the changes via ``git commit`` (don't forget the commit message)
 - 3 .Push the changes to GitHub via ``git push`` (don't forget to refer to the proper branch)
 - 4 .Create a pull request from the homework related branch to main (i.e., `main <- "homework branch"`)
 - 5 .Open and complete the merge of the pull request (it should turn purple)
 - 6 .Locally checkout main and pull the latest changes (to prepare for future work)
- 12 Take the same output file and upload it to Canvas
 - 1 .*This step is new since GitHub renders the PDF as an image the links aren't clickable so this method works better
 - 2 .*Remember, the github process of these files are encouragement for your tracking of your progress

Problem 1 (3 pts.)

^ COLLAPSE ^

Task #1 - Points: 1

Text: Screenshot of the Problem 1 Solved Code and Output

Details:

Only make edits where the template code mentions.

Solution should ensure that any passed in array will have only the odd values output.
Requires at least 2 screenshots (code + output from heroku dev)

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Edits were done only in the processArray() function and original template code/comments remain untouched
<input type="checkbox"/> #2	1	Only \$arr is used (no direct usage of \$a1, \$a2, \$a3, \$a4)
<input type="checkbox"/> #3	5	Only odd values output (not odd indexes/keys)
<input type="checkbox"/> #4	1	Includes code comments with student's ucid and date
<input type="checkbox"/> #5	1	Output of code includes heroku dev URL with student's ucid visible

Task Screenshots:

☐ Large Gallery

Checklist Items (0)

Checklist Items (0)

Screenshot of code

Screenshot with Heroku URL

Task #2 - Points: 1

^ COLLAPSE ^

Text: Explain your solution

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Clearly explains how the code/logic solves the problem (mentions how the odd values are determined)

Response:

Created a length variable to find the length of the array. Made a for loop to iterate through each item in the array. If the item had a remainder after being divided by 2, it would get printed.

^ COLLAPSE ^

Task #3 - Points: 1

Text: Link to Problem 1 file from Production

Details:

Recommended: Use the notes tool on the right to store the base URL for your heroku production URL

Paste the production URL below, append the path to the file from your dev URL.

Note: This link won't be active until you merge the pull request, so it's expected to not exist at the time of filling this task

Problem 2 (3 pts.)

^ COLLAPSE ^

^ COLLAPSE ^

Task #1 - Points: 1

Text: Screenshot of the Problem 2 Solved Code and Output

Details:

Only make edits where the template code mentions.

Solution should ensure that any passed in array will have the numerical values summed and rounded to two decimals (similar to currency)

Requires at least 2 screenshots (code + output from heroku dev)

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/>		

<input type="checkbox"/> #1	1	Edits were done only in the getTotal() function and original template code/comments remain untouched (unless noted)
<input type="checkbox"/> #2	1	Only \$arr is used (no direct usage of \$a1, \$a2, \$a3, \$a4)
<input type="checkbox"/> #3	5	Passed in array's values get summed AND rounded to two decimal places like currency (i.e., 0.00, 0.10, 1.10)
<input type="checkbox"/> #4	1	Includes code comments with student's ucid and date
<input type="checkbox"/> #5	1	Output of code includes heroku dev URL with student's ucid visible

Task Screenshots:

Checklist Items (1)

#5 Output of code includes heroku dev URL with student's ucid visible

Screenshot of code

Screenshot with Heroku URL

Task #2 - Points: 1

Text: Explain your solution

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Clearly explains how the code/logic solves the problem (mentions both how the values get summed and how the rounding is solved correctly)

Response:

Created a length variable to store the length of the array. Created a total variable to store the total value of the array. Used a for loop to iterate through each item of the array and added it to the total. Used the round function to round the value to 2 decimal places and printed the number.

Task #3 - Points: 1

Text: Link to Problem 2 file from Production

Details:

Recommended: Use the notes tool on the right to store the base URL for your heroku production URL

Paste the production URL below, append the path to the file from your dev URL.

Problem 3 (3 pts.)

^ COLLAPSE ^

Task #1 - Points: 1

Text: Screenshot of the Problem 2 Solved Code and Output

Details:

Only make edits where the template code mentions.

Solution should ensure that any passed in array will have its values converted to a positive version of the value AND converted back to the original data type.
Requires at least 2 screenshots (code + output from heroku dev)

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Edits were done only in the bePositive() function and original template code/comments remain untouched
<input type="checkbox"/> #2	1	Only \$arr is used (no direct usage of \$a1, \$a2, \$a3, \$a4)
<input type="checkbox"/> #3	5	Passed in array's values will get converted to a positive version AND converted back to the original data type
<input type="checkbox"/> #4	1	Includes code comments with student's ucid and date
<input type="checkbox"/> #5	1	Output of code includes heroku dev URL with student's ucid visible

^ COLLAPSE ^

Task #2 - Points: 1

Text: Explain your solution

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Clearly explains how the code/logic solves the problem (mentions both the conversion to positive and conversion to original data type)

Response:

Created a length variable to store the length of the array. Used a for loop to iterate each item in the for loop. If the item was a string, it would get converted to an int and then put back into it's place in the array. If it was already an int or float and it was a negative number, it would be multiplied by negative number or else it would stay the same. Each number in the array is printed after any changes to it needed to be made.

^ COLLAPSE ^

Task #3 - Points: 1

Text: Link to Problem 3 file from Production

Details:

Recommended: Use the notes tool on the right to store the base URL for your heroku production URL

Paste the production URL below, append the path to the file from your dev URL.

Note: This link won't be active until you merge the pull request, so it's expected to note exist at the time of filling this task

^ COLLAPSE ^

Reflection (1 pt.)

^ COLLAPSE ^

Task #1 - Points: 1

Text: Reflect on your experience

Details:

Talk about any issues you had, how you resolved them, and anything you learned during this process.

Provide concrete details/examples.

Response:

I had issues with getting the code to display on heroku and the local device. I used Discord to chat with professor Toegel and fixed my issues.

^ COLLAPSE ^

Task #2 - Points: 1

Text: Include the pull request link for this branch

Details:

The correct link will end with /pull/ and a number.
